**Main Contractor:** E. Duffy  
**Status:** Complete

**Services Provided:**  
Design Report  
Detailed Design  
Structural Steel BoQ  
and Tender Documentation  
Construction Supervision

The new primary school comprised of 1,000m<sup>2</sup> of classrooms, meals accommodation and assembly hall. The structural solution involved pad and strip foundations supporting a structural steel frame comprising of post and trusses.

The school is single storey and the use of high floor to ceilings, combined with a high percentage of fenestration, results in a bright and airy interior.

The carefully landscaped grounds add to the overall attractiveness of the school. The feature entrance naturally draws the visitor to the designated point of entrance.
